The 4 Steps of Thromboprophylaxis

Prevention of Venous Thromboembolism (VTE) should be considered for every patient admitted to acute care

STEP 1: Is thromboprophylaxis INDICATED?

YES

Prophylaxis not indicated if:

- Patient fully mobile AND
- Brief length of stay

Actions:

- No routine prophylaxis
- Reassess daily

STEP 2: Is anticoagulant thromboprophylaxis CONTRAINDICATED?

NO

Reasons:

- Active bleeding
- High risk of bleeding

Actions:

- TED stockings and/or Sequential Compression Devices
- Reassess daily

STEP 3: Provide APPROPRIATE THROMBOPROPHYLAXIS

Prophylaxis should generally be started within 24 hours of admission or after surgery

Evidence-based, guideline-recommended prophylaxis should be initiate and continued at least until discharge (and post-discharge where appropriate, e.g. post-major orthopedic surgery)

STEP 4: REASSESS if significant change in patient status or at transitions of care

- After surgery
- Transfer to or from intensive care
- Transfer to rehab
- At discharge
